EXPERIENCE

Evenica Corp. — TSQL Developer

Sept 2017 - PRESENT

I was a T-SQL Developer for a software company that dealt with e-commerce for high profile clients such as the LCBO. With Evenica I designed products and created high value product demos and functionality.

I also participated in Code Management using Git to manage code, as well as other software industry standards such as JIRA and scrum meetings. I enjoyed working in a team and solving problems within a group setting.

Hold 'em — A Texas Holdem Webapp

I am writing a webapp to simply create a lobby, join and play some Texas Hold 'em with some friends. This project is a hobby project I started so I could learn Socket.io and front end work. This project can be found on my Github

AutoManage — Automotive Business Solution

I am writing a webapp to record ongoing jobs, accounts payable and receivable, as well as create invoices for customers. The software allows the user to email customer reminders for vehicle service as well as the ability to email customers and suppliers their invoices. This project can be found on my Github

EDUCATION

Mohawk College, Hamilton — Software Development

SEPTEMBER 2015 - APRIL 2017

LANGUAGES / FRAMEWORKS
